Steel Production Pallets

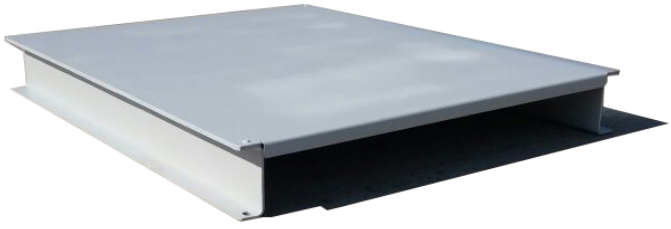
GENERAL

Steel pallets are used in the concrete product production line for manufacturing products like concrete block, interlocking paving stone, kerb, briquette and tile.

Steel pallets are sturdier and have longer lifetime than other types of pallets, besides steel pallets are recyclable products.



Steel Production Pallets

MANUFACTURING PROCESS

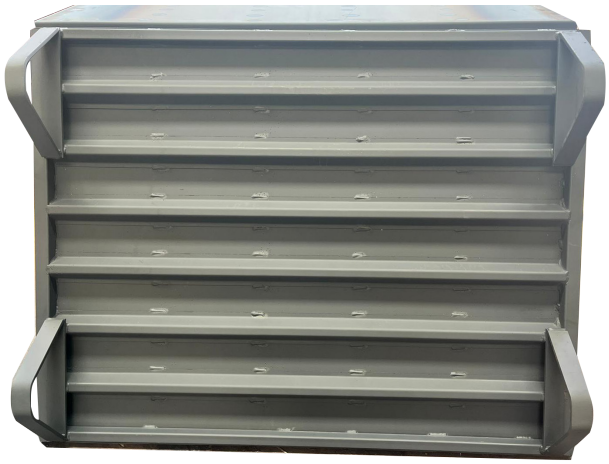
Steel pallets are processed at CNC Machines according to TSE and ISO Standards and steel basic wire and inert-gas welding are used at welding of point of junction that prevents problems in the future.

SPECIFICATIONS

The size of steel pallets (length, width and thickness) can be changed according to the customer need. Steel pallets are flat in each side. In accordance with customer need, angular cutting can be done at corners.

The quality of material used at manufacturing and our precision at welding of points of junction provide more reliable products with longer lifetime.

Our products are two types like footed pallet and footless palette.



MATERIAL

Steel pallets have a durability against high vibration and problems that can be occured during transportation.

TOLERANCE

Minimum ±2mm at all surfaces.

SIZE

We manufacture steel pallets in various sizes according to customer needs.

MACHINES USING OUR STEEL PALLETS

Our steel pallets are for machines with curing rack system, single-line press machines and multi-layer press machines
